Skills

Python: Game development
C#: Web application development
C: Algorithm and data structure implementation
Assembly: Low level programming and computer architecture
SQL: Relational database design and querying
Common Lisp: Functional, object oriented, logic, and parallel programming paradigms

Courses

Mathematics

- Linear Algebra
- Calculus
- Discrete Structures

Programming

- Programming Paradigms
- Software Engineering
- Computer Networking

Theoretical Computer Science

- Algorithms
- Data Structures
- Formal Languages & Automata
- Computability & Complexity

Graphics and Modeling

- 3D Printing
- Computer Graphics

Languages

Slovak: C2 (Native)
English: C1 (Advanced)
Danish: A2 (Elementary)

Hobbies

Crochet | Gaming | Exercise
Painting | Baking | Coffee

Summary

I recently graduated with a **Bachelor's degree in Computer Science**.
I have an interest in **full stack** software development and optimisation of existing systems. I'm particularly familiar with **Python, C#, HTML, and CSS**. I enjoy combining theoretical concepts with practical software development.
I **live in Denmark** and am currently **learning Danish**.

Projects

Automatontron

<https://github.com/ZuZanaZZ/Automatontron>

Designed and developed a logic game in **Python** using **Pygame**, based on automata theory. Utilised object oriented programming principles and **design patterns** to write maintainable code.
Translated theoretical models into gameplay systems.

Slay the Day

<https://github.com/ZuZanaZZ/Slay-the-Day>

Built a to do web application using **ASP.NET** Core MVC. Data persistence handled by Entity Framework Core and PostgreSQL. Styled with a **Bootstrap** theme.

Portfolio Website

<https://github.com/ZuZanaZZ/Portfolio-website>

Designed a responsive website with a focus on semantic **HTML** and accessibility. Implemented a minimalistic, visually cohesive interface with **CSS**.

Unity Dice

<https://github.com/ZuZanaZZ/Unity-dice>

Implemented an interactive scene with a rolling dice. Used **raycasting** to identify the resulting dice face accurately.

Simple COBOL Bank

<https://github.com/ZuZanaZZ/Simple-COBOL-bank>

Created a simulation of **transactions** between clients and a bank. Data is stored in a file where new clients can be added. Implemented **validation** of the transacted amount.

Education

Bachelor of Computer Science (Datalogi)

September 2022 - August 2025

Palacký University Olomouc, Czech Republic

With a specialisation in **programming** and software development.
